WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut one 453 mm length of 25 x 25 x 2 tube; ends square within 0.5 mm (use a mitre box), deburred inside and out.

Mark the bottom end. All four holes go through both side walls, on the centre line of one pair of faces (the side faces):

two 5.5 mm holes 15 and 40 mm up from the bottom (foot angles);

two 5.5 mm holes 45 and 85 mm down from the top (corner plates).

Drill from one side through both walls in a drill stand so the holes run straight; check a bolt passes freely.

The length sets the camera height: 453 mm puts the lens

440 mm above the mat with an 18 mm board and 4 mm mat.

Fit: stands on the board between the foot angles; the arm butts its

front face; the cable runs up its back face.

Check: length within 0.5 mm; ends square; four holes line up.
